welcome

July 1, 2002

Greetings,

We are lucky to live in King County. The natural beauty and natural resources throughout the County create a wealth that we can all enjoy. I am happy to present the first edition of the *Small Lakes Recreation Guide*, brought to you by the Lake Stewardship Program in the Department of Natural Resources and Parks. The pages of this guide will lead you to some of the most beautiful places in King County. Paddle a canoe in the shadow of Mount Rainier on Lake Meridian in Kent; enjoy a day at the beach at Lake Wilderness Park in Maple Valley; or spend a quiet evening fishing on Cottage Lake near Woodinville. No matter what part of King County you call home, there are small lakes nearby where you can swim, fish, boat, or just sit on the shore and enjoy a summer afternoon with a friend. This guide lists many of the smaller lakes in western King County with public access points, boat launches, swimming beaches, and/or parks.

I hope you share my enthusiasm for the wonderful, natural beauty found in King County. I encourage you to use this guide to get out and explore these lakes and their surrounding environs—you won't be disappointed!

Ron Sims King County Executive

Looking to get away from the crowds? Longing for a green patch of grass on which to run? Wish to view wildlife? Or just want to take a dip in cool, pristine waters?

Consider the public beaches and parks

found at several of King County's

smaller lakes.

These parks, often less crowded than those located on Lake Washington and Sammamish, yet close to metropolitan areas, provide a range of easily accessed amenities, such as swimming beaches, boat launches, and picnic areas. Some even offer ballfields, tennis and basketball courts, and rental facilities. (For an accounting of individual parks, consult the alphabetical listings in this guide.)

wildlife, including ducks and geese.

Feeding wild animals causes them to lose their fear of humans and also disrupts their natural

feeding patterns.

Please never feed

Many residents of south King County are familiar with Fivemile Lake Park. Located west of Auburn and east of Federal Way, it is one of the premier smaller parks in the King County Park system. Within its 27 acres are two tennis courts, a basketball court, open

meadows, and a swimming area. The park also has a network of internal trails.

Beaver Lake Park, on the south end of Beaver Lake, provides one of the best locations in the King County Park system for a wedding or other social functions. Many couples have tied the knot at the park's beautiful Issaquah Lodge, available year-round for rental. There are also an open-air pavilion, ballfields, a large picnic shelter, walking areas, and Native American art displays. In addition, the park features a natural area and wetland fostering a variety of wildlife, including birds, waterfowl, deer, raccoon, beaver, and toads.

King County's Lake Wilderness Park is not your average park. At 108 acres, it is a large regional park with lots of prime shoreline, preserved forestland, play and picnic areas, and meandering pathways. Located within the park is Lake Wilderness Center, hosting a variety of recreation programs. The Center also offers community services such marriage and pet licenses.

Beautiful, quiet Geneva Lake Park.

When visiting the

Several fishing docks and piers found in King County parks offer anglers a chance to try their luck.

Hikers take to the Lake Wilderness Trail that cuts through the park, following the edge of the shoreline. Jenkins Creek runs through the middle of the park, a tributary for Big Soos Creek that empties into the Green River. The park also includes three wetlands where a variety of birds and mammals make their home, including deer, beaver, raccoon, hawks, wrens, and ruffed grouse.

Due to recent budget constraints, some King County park areas may not have regular lifeguard service or trash pick-up. Visitors can help keep parks and beaches clean by packing out their own garbage, especially leftover food.

Fivemile Park offers plenty of family recreation options.

beautiful parks and public areas in King County, please tread lightly. Children may want to pick flowers, gather berries, dig up wild plants, or forge new trails, but such activities disturb the delicate ecosystem of the area and may adversely affect the animals living

nearby.

boating

King County lakes offer a variety of boating opportunities, from the quiet solitude of kayaking and canoeing to the excitement of water skiing. Speed limits, lake specific boating restrictions, equipment requirements, and other rules regarding boating activities fall under Section 12.44 of the King County Code. Washington marine laws also affect King King County have additional boating restrictions that may be posted at public boat launches or other public access areas.

When it comes to safety, all lakes in King County follow the same basic rules. Before getting on the water, make sure you have your personal flotation device (PFD). A PFD must be available, of appropriate size, and in serviceable condition for each person on board. It is illegal to water ski without wearing a personal floatation device. You also need a person on board who serves as an observer. The observer

the King County Code. Washingboat) must display a bright red or orton marine laws also affect King ange flag whenever the towed person County boaters. Some lakes in is in the water. In Washington, water King County have additional skiing is prohibited from sunset boating restrictions that may be until sunrise.

(who cannot also be the driver of the

King County Code holds the operation of personal watercraft (such as jet skis) to the same basic rules and requirements as any other powerboat.

Sailboats and other non-motorized watercraft have the right of way.

Operators of personal watercraft must be at least 14 years old. Also be aware that more and more lakes are passing additional rules regarding jet skis and their hours of operation. Additional restrictions are posted at public boat launches and other public areas. Speed limits are in effect for all lakes. Generally, no motor powered watercraft is allowed to operate in excess of eight miles per hour, unless posted otherwise. Exceptions to this limit are specified for lakes Meridian, Sammamish, Sawyer, and Washington where a more diverse set of uses occur (e.g. water skiing, transportation, or hydro racing). The higher speed limits for these lakes should be posted at or near public access points.

Boaters can further ensure our waters are safe for the enjoyment of all by keeping a lookout for invasive aquatic weeds.

One of the most troubling is Eurasian watermilfoil, an aggressive, non-native weed that threatens the safety of swimmers and boaters. First discovered in Washington in the 1970s, it now flourishes in Lake Washington, Sammamish, and several smaller King County lakes. Reproducing by a process of fragmentation in which smaller pieces of the plant break away and grow new roots, milfoil spreads to other waterbodies as people unknowingly transport fragments on their boats, motors, and trailers.

Sailing is a popular activity on many King County lakes.

To prevent milfoil and other noxious weeds and invasive aquatic species from infesting new areas, remove all weeds from boats and trailers each time the boat is pulled out of the water. Dispose of the weeds in a garbage can, not back in the water. It is now illegal in Washington state to leave a boat launch without first removing all weeds from the

vessel and trailer.

fishing

Trout rising to the surface on a late summer afternoon. Bass lurking in the shallows. A father and son peacefully fishing from a rowboat, waiting for the next strike

while a young woman casts out her line from the shore. It's not just the larger lakes in King County with scenes like these. Many of the County's smaller lakes offer big fishing opportunities as well.

Individual lake listings in this guide provide specific information about length of the fishing season, and fish species present in each lake. However, fishing regulations change often. To learn more, go to the list of resources on page 11 for the Washington Department of Fish and Wildlife contact information.

Fishing regulations are developed to maintain healthy fish populations. Adhering to them helps ensure good fishing for years to come. In addition, follow a few common sense rules while you are out on the lake.

Use only the methods of propulsion that is permitted on the lake. Many lakes do not allow internal combustion engines. Some prohibit use of electric motors as well. Check local regulations.

Only visit the lake during hours of operation for the park or boat launch. Hours vary at different lakes. Check locally. Minimize noise—from outboard motors, radios, shouting.

Please be respectful of wildlife and residents living around the lake. It is your visit, but their home.

You can also do your part to keep lakes healthy for fish and humans. Please leave no trash behind and be aware that there are plants and animals that can "pollute" lakes as well.

Non-native species pose a threat to our northwest ecosystems. Aquatic weeds like milfoil can grow from tiny fragments that "hitchhike" on boats, trailers, and fishing gear from one lake to

It is advisable to check with the Washington Department of

Fish and Wildlife,

the agency that

sets fishing

regulations across

Washington state,

for updates.

the next. Be sure to check your boat, trailer, and gear for weed fragments before you launch, and after you leave the water.

Also be on the lookout for invasive animal species. Although not yet documented west of the Missouri River, zebra mussels are a serious concern because of their ability to attach to almost any underwater surface and their lack of natural predators. In the Great Lakes region zebra mussels are responsible for clogging water intake pipes, fouling outboard motors, and rendering entire shorelines unusable because of their sharp shells. Zebra mussels can survive many days out of the water and larval stages can survive in live bait wells.

Many of the smaller lakes in King County have public fishing docks and piers.

If your boat has recently been east of Missouri, please rinse it thoroughly

before launching.

Another invasive animal that could become a problem might be tempting to use as bait, or as a meal on its own. The red swamp crayfish is a native of the southeastern United States. This small crayfish can outcompete native crayfish, and prey on native plant, fish, and amphibian communities.

swamp crawfish is present in several King County lakes. To avoid further spread of this invader, please do not take live crayfish away

from lakes.

wildlife

Lakes and their surrounding shorelines and woods teem with life of all kinds. From those with fur to feathers to scales, here are a few of the critters you may see when visiting King County lakes.

Around lakes with abundant cattails and other emergent plants, watch for redwing blackbirds to flash their crimson wing patches.

Feeding ducks and geese will encourage them to hang around docks and lawns, making messes and increasing nutrient inputs to lakes. In some cases animals become aggressive due to humans feeding them. It is better to watch all wildlife from a

respectful distance.

Along the edges of reeds look for a furry brown head bobbing in the water—chances are it's a beaver, otter, or muskrat. Around city lakes, raccoons and opossums are sometimes visible, while at the more rural lakes you may see signs from a passing coyote, deer, and possibly even bear or cougar.

Much easier to spot are our feathered friends. Many waterfowl can be seen living on our lakes—everything from the common mallards and Canada geese to the rare and beautiful wood ducks, hooded mergansers, and loons.

The belted kingfisher with its distinctive blue mohawk often perches near the water's edge. And don't forget to look up—ospreys and eagles can nest in tall cottonwoods or broken conifers by lakes.

King County isn't warm enough for many scaly creatures, but the few reptiles that can be found here are always a welcome sight. (Don't worry, *no* poisonous snakes live in King County.)

Look for the gentle garter snake as it slides under brush near the shoreline.

Check sunny, isolated rocks for basking alligator lizards, and watch branches sticking out of the water to see if a painted turtle or red-eared slider is catching some rays.

In calm, shallow water with lots of reeds and rushes, frogs, toads, and salamanders can be found. You could be lucky enough to spy a red-legged frog or a western toad. (The difference between frogs and toads? Frogs hop, toads crawl!) Peer into the water to catch a glimpse of the intermediate phase of a salamander or newt swimming around.

We have more kinds of weird and wonderful invertebrates in our lakes than all other types of animals put together. Some are big and elegantly beautiful, such as butterflies and dragonflies.

Others have an ecological importance that far outweighs their tiny size: Daphnia (waterfleas) are barely visible, yet they can clean up algae blooms like little vacuum cleaners.

While it may be tempting to feed the animals found in and near County lakes, please don't. Human food has several bad effects on wildlife, especially waterfowl.

Dogs may be our best friends, but they can harm wildlife. On a playful romp in the woods Fido may step on nests, knock fledglings out of bushes, and chase animals away from food sources. Swimming dogs can disturb nesting and roosting sites or stir up bottom sediments, affecting organisms that live in the water. Out of respect for wild critters, please let dogs run loose and swim in designated

areas only.

resources

The Small Lakes Recreation Guide is published by King County's Department of Natural Resources and Parks Lake Stewardship staff. To ensure the continued health of small lakes for public enjoyment and ecological integrity, the Lake Stewardship staff and trained volunteers conduct ongoing water quality monitoring and stewardship efforts.

Over 75 volunteers help collect information on the lakes of King County. Our monitors serve as the eyes and ears of the Lake Stewardship program, alerting staff to problems and interesting events on individual lakes. By collecting data on lake level, precipitation, water quality, and aquatic plants, we can better understand how individual lakes work and how best to preserve their quality.

If you would like more information on the Lake Stewardship program or how to become a volunteer lake monitor, please contact staff members:

Sally Abella—Program Manager, (206) 296-8382 Michael Murphy—Environmental Scientist, (206) 296-8008 Katie Sauter—Volunteer Coordinator, (206) 296-0516
